- Co-founder of Danish Carl Rogers Forum with Lisbeth Sommerbeck
- EFT therapist and supervision trained by Leslie Greenberg
- Private practice & IPCOPT
Accept, empathy and congruence in psychotherapeutic practice

- Investigating the legacy of Carl Rogers
- Research has repeatedly shown the effect of relationship factors
- 9 schools of therapy describe their use of the empathy, accept and congruence
- EFT and core conditions
The necessary and sufficient conditions of constructive personality change

1. Two persons are in psychological contact.

2. The first, whom we shall term the client, is in a state of incongruence, being vulnerable or anxious.

3. The second person, whom we shall term the therapist, is congruent or integrated in the relationship.

4. The therapist experiences unconditional positive regard for the client.

5. The therapist experiences an empathic understanding of the client’s internal frame of reference and endeavours to communicate this experience to the client.

6. The communication to the client of the therapist’s empathic understanding and unconditional positive regard is to a minimal degree achieved.

(Rogers, 1957)
Emotion Focused Therapy

- Neo-humanistic perspective
- 35 years research program
- Emotion theory
- Person-Centered and experiential emotional process-guiding relational stance
- Marker-guided task strategy

Elliott, Watson, Goldman & Greenberg (2004)
Basic Principles of Emotion-Focused Therapy

A. Relationship Principles: Facilitate safe, productive relationship:

1. **Empathic Attunement**: Enter, track clients' immediate and evolving experiencing

2. **Therapeutic Bond**: Actively offer accepting, congruent, empathic presence to clients

3. **Task Collaboration**: Facilitate mutual involvement in goals and tasks of therapy

B. Task Principles: Facilitate work on specific therapeutic tasks:

4. **Process Differentiation**: Offer clients opportunities to work in different ways at different times, according to the current task they are engaged in

5. **Task Completion/Emotional Change**: Help clients resolve key therapeutic tasks in order to facilitate reorganisation of core maladaptive (no longer useful) emotion schemes

6. **Self-development**: Help clients differentiate and access new experiencing, inner strength or resources, agency or self-empowerment

Aspects of EFT in relation to CC

1. Therapist internal processes
2. Therapist experiential response modes
3. Client processes
4. Empathy tasks
Therapist

1. Therapist internal processes

2. Therapist experiential response mode

3. Client micro process

4. Empathy tasks

Client

Immediate & evolving Experience

Deconstruction
Reconstruction

Affect regulation

Interpersonal process
1. Therapist internal processes

- Presence and genuineness
- Empathic attunement
- Accepting, prizing and trust
- Collaboration
- Procedural knowledge of the model
- Process awareness and guiding stance
Presence and genuineness

- **Presence**
- **Genuineness**
  - **Wholeness** - not divided, contact with self
  - **Authenticity** - being who you are, real
  - **Transparent** - showing who you are
Acceptance, praising, trust

- **Accepting**
  - Letting go of values, standards preferences
  - Not approval or endorsement
  - Validation of experience as actual (vs. illusory), interesting, unique, meaningful, understandable, tolerable, valid

- **Praising**
  - Active sense of caring, valuing
  - Varm, emotionally touched

- **Trust**
  - "unconditional confidence"

(Elliot, Watson. Goldman & Greenberg, 2004)
Empathic Attunement

- Present maintained understanding of clients internal experience as it evolves moment to moment

- Follow client on several tracks
  - What client is talking about, immediate experience, emerging experiences and what it is like to be the client

- Imaginative, bodily experience
  - not conceptual
  - T Feeling same or complementary feeling
  - T Grasp C experience in lively, poignant and emotionally near way, then the way of communicating is less critical

- Subprocesses of empathy
  - Entering, letting go, ...
The client is expert on his or her own experience
Empathy – sub process

- Letting go
- Entering
- Resonating
- Searching and selecting
- Grasping and expressing

(Elliot, Watson. Goldman & Greenberg, 2004)

Rogers therapy responses

- Informs about the therapy
- Confirms attention (Hm, hm)
- Checks understanding
- Reflects empathically
- Validates clients unspoken emotions
- Reassures, answers

- Interpretations
- Confrontations
- Direct questions
  - Turns questions back to client
- Keeps or breaks silence
- Self disclosure
- Accepts corrections from client

Brink & Faber, 1996
Main expression of core conditions in therapist experiential response modes

1. Empathy
   - Reflection, affirmation, following, exploratory reflection, evocative reflection, exploratory question, fit question, process-observation, empathic conjecture, empathic refocusing

2. Accept
   - Empathic affirmation, nonverbal and extra verbal behaviour

3. Genuineness
   - Nonverbal and extra verbal behaviour, process disclosure, personal disclosure

(Elliot, Watson. Goldman & Greenberg, 2004)
3. Client processes

1. **Experience of events** (content)

2. **Micro-processes** (ways of processing experience)
   - Micromarkers
     - Verbal, non-verbal, level of arousal and experience
   - Markers of characteristic style
   - Mode of engagement markers
     - Non-experiential, experiential
   - Task markers
   - Treatment foci indicators

(Elliott, Watson, Goldman & Greenberg, 2004)
Following and leading
Empathy - Active process of change

Interpersonal function - therapeutic relationship
- Safe, understood, supported
- Build alliance and prevent alliance rupture
- Part of negotiation of goals

Explorative and deconstructive function
- Hermeneutic process (interpretation of text)
- Deconstruction → reconstruction of understanding

Affect regulation
- Relief and satisfaction in being understood
- Containing emotions
- Greater self-soothing and self worth

(Elliot, Watson. Goldman & Greenberg, 2004; Watson, 2001)
**EFT Tasks**

**TASK RESOLUTION**

1. Marker and initiation
2. Evoking and entering
3. Deepening
4. Partial resolution
5. Restructuring
6. Carrying forward

<table>

4. Empathy Tasks

<table>
<thead>
<tr>
<th>Task Marker</th>
<th>Intervention</th>
<th>End State</th>
</tr>
</thead>
<tbody>
<tr>
<td>Problem-Relevant Experience</td>
<td>Empatic Exploration</td>
<td>Clear marker, or new meaning explicated</td>
</tr>
<tr>
<td>(e.g., interesting, troubling, intense, puzzling)</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Vulnerability</td>
<td>Empathic Affirmation</td>
<td>Self-affirmation (feels understood, hopeful, stronger)</td>
</tr>
<tr>
<td>(Painful emotion related to self)</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
1. Marker confirmation: Problem-relevant experiencing (personal, relevant, incomplete)

2. Task initiation: Initial description

3. Deepening
   a. Turning attention to internal experiencing
   b. Re-experiencing (past events)
   c. Searching edges (unclear, troubling, painful, confusing, unfinished, emerging)
   d. Differentiating (specifying aspects and qualities)
   e. Elaborating
      • context
      • emotion
      • bodily sense
      • symbolization
      • need or action tendency

Closure and Resolution

4. Partial resolution (clarification)
5. More complete resolution: (appreciation and owning)
6. Full resolution (relief and empowerment)
relation has primacy over process
Therapist

1. Therapist internal processes
2. Therapist experiential response mode

A. Simple empathy

<table>
<thead>
<tr>
<th>Empathic Reflection</th>
<th>Accurately represent most central, poignant or strongly-felt aspect of client's message.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empathic Following</td>
<td>Brief responses which indicate that therapist understands what client is saying (acknowledgments and empathic repetitions).</td>
</tr>
<tr>
<td>Empathic Affirmation</td>
<td>Offer validation, support, or sympathy when client is in emotional distress or pain.</td>
</tr>
</tbody>
</table>
# B. Empathic Exploration

<table>
<thead>
<tr>
<th>Exploratory Reflection</th>
<th>Simultaneously communicate empathy and stimulate client self-exploration of explicit and implicit experience, through open-edge or growth-oriented responses.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Evocative Reflection</td>
<td>Communicate empathy while helping client to heighten or access experience, through vivid imagery, powerful language or dramatic manner.</td>
</tr>
<tr>
<td>Exploratory Question</td>
<td>Stimulate client open-ended self-exploration.</td>
</tr>
<tr>
<td>Fit Question</td>
<td>Encourage client to check representation of experience with actual experience.</td>
</tr>
</tbody>
</table>
## B. Empathic Exploration

<table>
<thead>
<tr>
<th>Process Observation</th>
<th>Nonconfrontationally describe client in-session verbal or nonverbal behavior (usually with Exploratory Question).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Empathic Conjecture</td>
<td>Tentative guess at immediate, implicit client experience (usually with Fit Question).</td>
</tr>
<tr>
<td>Empathic Refocusing</td>
<td>Offer empathy to what the client is having difficulty facing, in order to invite continued exploration</td>
</tr>
</tbody>
</table>
## D. Experiential Presence

<table>
<thead>
<tr>
<th>General</th>
<th>Generally communicated via speech, paralinguistic, nonverbal manner (e.g., warm/gentle vocal quality, responsive facial expression, self-deprecatory humor, exploratory manner, respectful silence).</th>
</tr>
</thead>
<tbody>
<tr>
<td>Process Disclosure</td>
<td>Share own here-and-now reactions, intentions or limitations.</td>
</tr>
<tr>
<td>Personal Disclosure</td>
<td>Share relevant information about self.</td>
</tr>
</tbody>
</table>
Empathy and case formulation

Emotions

Primary, Secondary, Instrumental, Adaptive or maladaptive

Emotion schemes

Intensity, experiential depth,

Differentiation, narration

Affect regulation
Core conditions facilitative attitude

1. Safety
2. Ideal working space
3. Therapeutic Bond
4. Promote autonomy
5. Affect regulation

(Watson, 2007)
Affect regulation - CC

1. Awareness of affective reaction

2. Label and symbolise inner experience

3. Affective reaction are modulated
   - Represent in words
   - Internalization of therapist soothing, nurturing and accepting stance of therapist

4. Cultivate clients reflective capacity on them self

(Watson, 2007)
Proces-outcomes:

- Access emotion in therapy
- Experiential depth
- High emotional intensity
- Expression of high emotional intensity (Not too much and not too often)
- Processing of emotions (symbolising, congruence, accept, ownership, regulating and differentiating)
- Transformation of emotional schemes

In a safe relationship, with reflection and attuned to the client

<table>
<thead>
<tr>
<th>Task Resolution Stage</th>
<th>Client Process</th>
<th>Therapist Responses</th>
</tr>
</thead>
<tbody>
<tr>
<td>0. Premarker</td>
<td>Marker is not clearly present, but may be implicit in client’s experiencing.</td>
<td>• Listen for, reflect toward possible task markers.</td>
</tr>
<tr>
<td>1. Marker/Task Initiation</td>
<td>Client presents indication that he/she is currently experiencing a particular kind of processing difficulty and is agreeable to work on it with therapist.</td>
<td>• Reflect, confirm client marker. • Elicit client collaboration for task.</td>
</tr>
<tr>
<td>2. Evocation</td>
<td>Client begins to explore and express difficulty, so that it starts to come alive.</td>
<td>• Offer special procedures to address particular task, as appropriate. • Help client explore difficulty • Evoke, intensify client's arousal.</td>
</tr>
<tr>
<td>3. Exploration/Deepening</td>
<td>Client explores difficulty via a dialectical process, either with therapist or between different aspects of self. (Exploration process may be lengthy.) Eventually, primary underlying feelings begin to emerge, along with underlying emotion schemes and related needs and values.</td>
<td>• Help client access and differentiate primary and secondary feelings, emotion schemes, needs, values. • Help client stay involved with task and in contact with experiencing.</td>
</tr>
<tr>
<td>4. Partial Resolution (Emerging Shift)</td>
<td>Client accesses new aspects of experiencing, including previously overlooked aspects of emotion schemes; as a result, begins to feel at least a small shift in experiencing.</td>
<td>• Listen for, reflect emergence of new experiencing.</td>
</tr>
<tr>
<td>5. Restructuring/Scheme Change</td>
<td>Client experiences a clear shift in how he/she seeing self or others, such as owning/accepting previously ignored aspects of self, coming to understand something about self or others better, or coming to see self or others in a more positive light or self as more powerful.</td>
<td>• Help client solidify emerging shift by exploring, appreciating, or symbolizing it.</td>
</tr>
<tr>
<td>6 Carrying Forward (Full Resolution)</td>
<td>Client pursues further implications of shift, including negotiation among competing needs/values, and commitments to pursue action consistent with new experiencing. Experiences greater contact with experiencing, clear symptomatic/bodily relief.</td>
<td>• Facilitate exploration of implications, including negotiation and appreciation of emerging experiencing.</td>
</tr>
